

I have a temporary paid position in Geospatial Technology Services starting in early July to assist me with the development and implementation of data analytics platforms for countywide and neighborhood demographics. The work involves data collection, management, using ArcGIS products such as Pro, Community Analyst, and Hub, and will allow the employee to be creative and find ways to streamline data updates. We are open to continuing the employee's position beyond the summer months! The position is hybrid remote (3 days) and in-office (2 days) with a preference for Wed and Thurs for in-office days.

Anyone interested should email me directly at bengelmann@pwcgov.org. Feel free to ask questions and please attach a resume. Recent graduate preferred based on level of technical experience needed and the potential for continued employment with Prince William beyond the summer months.

Best,
Brian
